

Introducing the Great Plains Quality Innovation Network

CIMRO of Nebraska, the Kansas Foundation for Medical Care, Quality Health Associates of North Dakota and the South Dakota Foundation for Medical Care aligned to form the Great Plains Quality Innovation Network-Quality Improvement Organization (QIN-QIO). The Great Plains QIN was awarded a contract to serve as the QIN-QIO for Kansas, Nebraska, North Dakota and South Dakota through July 2019. The focus of the QIN-QIO activity is quality improvement and technical assistance.

Each of the four Great Plains QIN state partners share a commitment to improving quality of care and working to ensure all patients receive the right care, at the right time, every time. Working together, each organization focuses on improving care in conjunction with state partners, while pooling resources and common elements to best serve the needs of healthcare providers and Medicare consumers across the region.

About Quality Innovation Network – Quality Improvement Organizations (QIN-QIOs)

The Centers for Medicare & Medicaid Services (CMS) QIO Program is an integral part of the U.S. National Quality Strategy and is one of the largest federal programs dedicated to improving health quality at the community level. This network of experts works in partnership with patients and families, providers, communities and healthcare stakeholders in every care setting. QIN-QIOs assist patients and families, providers and communities to make care safer, support active engagement and self-management of chronic conditions, eliminate health disparities, promote best practices for healthy living, deliver improved access to care and make care affordable.

Reducing Healthcare-Acquired Conditions in Nursing Homes

More than three million Americans rely on services provided by nursing homes at some point annually. About 1.4 million Americans reside in the nation's 15,600 nursing homes on any given day. Those individuals, and an even larger number of their family members, friends and relatives, rely on nursing homes to provide reliable, high-quality care. The Affordable Care Act called for CMS to develop a strategy that will guide local, state and national efforts to improve quality of care in nursing homes. The most effective approach is one that mobilizes and integrates all available tools and resources; aligning them in a comprehensive, actionable strategy that nursing homes can adopt and sustain.

In August 2014, CMS has established a new functional structure for the Quality Improvement Organization (QIO) Program that delivers program value to patients and families, maximizes learning and collaboration for improving care and supports the spread and sustainment of effective new practices and care models. Under this structure, CMS has separated case review from quality improvement work, with both segments of the Program serving all 50 states and three territories.

Two Beneficiary and Family Centered Care-QIOs review quality of care concerns and appeals, while 14 Quality Innovation Network-QIOs work with providers and communities on data-driven quality initiatives to improve patient safety, reduce harm, engage patients and families and improve clinical care at the community level. Quality Innovation Network – Quality Improvement Organizations

Safe Care that is Patient and Family-Centered, Reliable and Accessible

Reducing Care Delivery Harm and Promoting Coordinated Care

Through the National Nursing Home Quality Care Collaborative, QIN-QIOs support system-wide improvement, which helps eliminate Healthcare-Acquired Conditions (HACs), like pressure ulcers and falls and can dramatically improve resident satisfaction. Thousands of facilities across the country participated in the collaborative between 2012 and 2014 and many are continuing participation. Others are invited to join, especially those that attained a one-star rating in CMS' Nursing Home Compare program, indicating they have room for improvement on multiple dimensions of resident care and safety. QIN-QIOs lead the regional and community levels of the Collaborative, which provides training and tools based on the best clinical, management and leadership practices of high-performing nursing homes. Topics include increasing mobility among long-stay residents, decreasing unnecessary use of antipsychotics for residents with dementia, preventing potentially avoidable hospitalizations and decreasing HAIs and other HACs. QIN-QIOs supplement collaborative activities with focused technical assistance to help facilities implement what they have learned.

Promoting Effective Care Coordination and Communication

Both the national and CMS Quality Strategies recognize the importance of coordinating clinical decisions and improving communication between providers. The QIO Program has made great strides in helping providers and communities reduce avoidable readmissions and improve transitions of care (at about \$1 billion in cost savings from 2011 to 2014). QIN-QIOs are uniquely situated to spark and strengthen community-based care coordination initiatives through their experience in building coalitions of acute and post-acute providers, practitioners, long-term care services and supports, patients and their advocates and other local stakeholders.

Adverse Drug Events (ADEs) are a factor in the care coordination equation. Poorly coordinated care contributes to ADEs when different providers unknowingly prescribe medications that have the potential to conflict and complicate the patient's condition. In turn, ADEs may trigger unnecessary diagnostic tests and avoidable hospital readmissions. From 2011 to 2014, QIO Program efforts to improve care transitions helped avoid approximately 44,640 potential ADEs.

As the Program moves forward to amplify and extend its assistance for care coordination, QIN-QIOs will continue to play an essential role, facilitating the formation of new coalitions and encouraging all collaborative groups to focus on improving the quality of care. Emphasis is placed on serving Medicare consumers with multiple chronic conditions, with health literacy needs or those living in rural areas, specifically, those who will benefit the most from the transformation of our fragmented healthcare system into one in which coordinated care is the norm.

Learn More and Become Involved

The Great Plains QIN and the QIO Program invites all providers, community stakeholders, Medicare consumers, family members and caregivers to become partners in its improvement initiatives. For more information on the services offered in our region, [visit our Website](#). Also, be sure to join our Learning and Action Network to get connected. LAN members will have access to tools, resources, education, subject matter experts and networking opportunities. All improvers welcome; [join today!](#)
