

Background

Communities across the Great Plains Quality Innovation Network (QIN) region are collaborating to improve care coordination. The goal of the communities is to achieve at least 7% relative improvement in avoidable hospital admissions and at least 10% relative improvement in avoidable readmissions between 2014 (baseline) and 2019 (remeasurement). As a partner in the Great Plains QIN, Kansas Foundation for Medical Care is complementing these efforts by sharing data reflecting each community's progress toward achieving these goals.

Admissions per 1,000 Beneficiaries

30-Day Readmissions per 1,000 Beneficiaries
