

Opioid Prescribing Rates by County

2018Q2 thru 2019Q1

County Rate Avg. \pm Std.Dev.: 6.1762% \pm 0.1371% (weighted)

This state map provides the percentage of initially filled prescriptions for consumers not undergoing cancer treatment or in palliative care that were identified to be an opioid using Medicare part D claims from CMS listed with a known prescription type NDC obtained. Attribution of a consumer to a county is based upon that consumer's zip code filed on the claim. Using data available within SAS, each zip code is then attributed to a county¹. Our goal is to reduce the over-usage of opioids in this state and the nation as a whole.
