

Immunizations

Who needs a flu shot? ⇨ ↑ Everyone 6 months of age and older.

Get your flu shot!

Do your part... Protect, Prevent and Preserve

Cover your cough

Wash your hands

Stay up-to-date with immunizations

Stay home when sick

Take antibiotics responsibly

Lives depend on it

Vaccines recommended for those 65 years or older:

Influenza (flu)

You need a dose every fall (or winter) for your protection and for the protection of others around you.

Pneumococcal

You should receive a pneumococcal conjugate vaccine, either PCV15 or PCV20. If PCV15 is used, this should be followed by a dose of PPSV23.

Tetanus, Diphtheria, Pertussis (Tdap)

Adults who have not received a dose of Tdap during their lifetime need to get Tdap (the whooping cough vaccine). You need a TD booster dose every 10 years.

Shingles

You should get two doses of Shingrix, 2-6 months apart, to protect yourself against shingles and long-lasting pain.

COVID-19
