

North Dakota Cancer Screening Initiative

Early Detection – Should You be Screened for Lung Cancer – Saving Lives One Scan at a Time

The American Lung Association is working to increase lung cancer screening rates. This intervention integrates public health equity best practices through building awareness and reducing barriers to care, increasing early-stage cancer diagnosis, increasing early intervention, reducing morbidity and mortality rates and providing appropriate patient support to lung cancer screening referrals and facilitate low-dose CT for all eligible clients within the state of North Dakota.

What can the Lung Association provide for your clients?

Receive [guidance and resources](#), in both English and Spanish

- Provide support and education on Lung Cancer Screening and eligibility
- Transportation assistance (vouchers)
- Tobacco cessation referral (free services)
- Review the benefits of a low-dose CT scan
- Scheduling assistance

How is assistance provided for partners?

- Provide patient navigation, if applicable
- Quality improvement guidance
- Referral linkages to American Lung Association and community resources
- Patient assistance program enhancement
- Courage kits for patients
